

ResumeAI Complete Uninstall Checklist

1. Stop Running Services

```
bash

# Stop any running processes
pkill -f "unicorn server:app"
pkill -f "yarn start"
pkill -f "npm start"
pkill -f "python.*server.py"
```

2. Remove Application Files

```
bash

# Remove the main application directory
rm -rf ~/resumeai
# Or wherever you cloned it
rm -rf /path/to/resume_optmzr.1.2
```

3. Remove Python Virtual Environment

```
bash

# If you created a venv in the backend directory
rm -rf ~/resumeai/backend/venv
# Or any global venv you might have created
rm -rf ~/.virtualenvs/resumeai
```

4. Remove Node.js Dependencies

```
bash

# Remove node_modules (if not already removed with app directory)
rm -rf ~/resumeai/frontend/node_modules
```

5. Remove MongoDB Data (if installed locally)

```
bash
```

```
# Stop MongoDB service
brew services stop mongodb-community
# Or: sudo systemctl stop mongod
```

```
# Remove MongoDB data directory
rm -rf /usr/local/var/mongodb
# Or: rm -rf /data/db
```

```
# Remove MongoDB log files
rm -rf /usr/local/var/log/mongodb
```

6. Remove LaunchDaemons/LaunchAgents (if any were created)

```
bash

# Check for any launch daemons
ls ~/Library/LaunchAgents/ | grep -i resume
ls ~/Library/LaunchDaemons/ | grep -i resume

# Remove any found files
rm ~/Library/LaunchAgents/com.yourcompany.resumeai.plist
```

7. Remove Environment Variables

```
bash

# Remove from shell profile files
nano ~/.zshrc # or ~/.bashrc
# Remove any lines containing GEMINI_API_KEY, MONGO_URL, etc.

# Reload shell
source ~/.zshrc
```

8. Remove Python Packages (if installed globally)

```
bash

# If you installed packages globally
pip uninstall emergentintegrations
pip uninstall fastapi uvicorn python-multipart
```

9. Remove Docker Containers/Images (if used)

```
bash
```

```
# Stop and remove containers
```

```
docker stop $(docker ps -q --filter "name=resumeai")
```

```
docker rm $(docker ps -aq --filter "name=resumeai")
```

```
# Remove images
```

```
docker rmi $(docker images -q --filter "reference=resumeai*")
```

10. Remove Nginx Configuration (if configured)

```
bash
```

```
# Remove nginx config files
```

```
sudo rm /etc/nginx/sites-available/resumeai
```

```
sudo rm /etc/nginx/sites-enabled/resumeai
```

```
sudo nginx -s reload
```

11. Clean System Processes

```
bash
```

```
# Check for any remaining processes
```

```
ps aux | grep -i resume
```

```
ps aux | grep -i gemini
```

```
ps aux | grep -i mongo
```

```
# Kill any remaining processes
```

```
sudo pkill -f resume
```

12. Remove from PATH (if added)

```
bash
```

```
# Check and remove from PATH in ~/.zshrc or ~/.bashrc
```

```
# Remove any lines that add resumeai to PATH
```

13. Clear Browser Data

- Clear localhost:3000 and localhost:8001 from browser history
- Clear any stored form data or cached files

14. Remove Application Support Files

```
bash
```

```
# Remove any app support files
```

```
rm -rf ~/Library/Application\ Support/ResumeAI
```

```
rm -rf ~/.resumeai
```

Verification Commands

```
bash
```

```
# Verify nothing is running
```

```
lsof -i :3000
```

```
lsof -i :8001
```

```
lsof -i :27017
```

```
# Check for any remaining files
```

```
find ~ -name "*resume*" -type d 2>/dev/null
```

```
find ~ -name "*gemini*" -type f 2>/dev/null
```

Final Steps

1. Restart your computer to ensure all processes are stopped
2. Run `brew cleanup` to remove any orphaned dependencies
3. Check Activity Monitor for any remaining processes
